GENERAL INFORMATION:
APPLICANT: WalkerPeach, Cindy
APPLICANT: DuBois, Dwight
TITLE OF INVENTION: Compositions, methods and Kits for Herpes Simplex Virus
TITLE OF INVENTION: Nucleic Acid Detection
FILE REFERENCE: 25436/1280
CURRENT APPLICATION NUMBER: US/09/594,065
CURRENT FILING DATE: 2000-06-14
NUMBER OF SEQ ID NOS: 14
SOFTWARE: Patentin version 3.0
SEQ ID NO 1
LENGTH: 20
TYPE: DNA
                                             Matches
                                                            Query Match

GENERAL INFORMATION:

APPLICANT: WalkerPeach, Cindy
APPLICANT: WalkerPeach, Cindy
ITILE OF INVENTION: Compositions, methods and Kit
TITLE OF INVENTION: Compositions, methods and Kit
TITLE OF INVENTION: Mucheic Acid Detection
FILE REFERENCE: 25436/1280

CURRENT APPLICATION NUMBER: US/09/594,065

CURRENT APPLICATION NUMBER: US/09/594,065

CURRENT FILING DATE: 2000-06-14

NUMBER OF SEQ ID NOS: 14

SOPTWARE: PatentIn version 3.0

SEQ ID NO 8

LENGTH: 74

TYPE: DNA
ORGANISM: Artificial Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               nucleic search, using
